# Truck Frames: What we do. Who we are.

We produce hi-tensile steel truck frames in lengths ranging from 1' -0" to 48' -0" plus. These "C" channel truck frames are fabricated to order and custom-sized to fit your medium or heavy duty truck. We offer several thicknesses of hi-tensile steel: 1/4", 5/16", 3/8", 1/2".

We are proud to offer the fastest turnaround in the industry --24 hours for standard, blank truck frames! As always, we guarantee accuracy. If the frame we fabricate to your specifications is not within our tolerances, we'll take it back!

## The P.G. Adams Difference

### Fastest frame production in the industry

**24 hour turnaround** on blank frames reduces down time and helps you keep your trucks up and running.

### Guaranteed accuracy

We guarantee accuracy on **every** truck frame we fabricate.

### Extreme lengths

Eliminate the need for splicing with one full length frame, custom-sized to fit your truck. We stock hi-tensile steel **up to 48 feet** with forming capacity up to 52 feet.

### Hi-tensile steel

We always use hi-tensile steel to help you **match factory strength** and achieve RBM requirements. We stock 1/4", 5/16", 3/8" and 1/2".

## Why do I need a truck frame?

### My truck is too short

We can fabricate a new section of frame to abut your existing to achieve the new desired length. Better yet, instead of splicing, consider having us fabricate continuous, full length frames.

### I have an out of production truck frame

If your truck is no longer in production, you may not be able to get frame rails from the OEM. We can duplicate your existing truck frames, and even make modifications if you require a longer wheelbase or are changing suspensions.

### My truck frame is badly rusted or cracked

Rusty and/or cracked frames can become very unsafe. We can fabricate new truck frames or even reinforcements to help get your truck back in shape. Looking to eliminate rust between double frames? We may be able to help by offering 1/2" thick steel in our Grade 100 material for a strong, single frame solution.

### I'm changing my truck body and my truck needs to be stronger

We can fabricate inner and outer reinforcements in varying thicknesses to help you meet the RBM needs of your particular application.

### I'm building a custom truck

Whether you're building a custom show truck or a custom workhorse, we can fabricate truck frames for your one-of-a-kind project with a little help from you. See the next page for details on our easy-bolt frames with holes.

*\*\*NOTE: All design, engineering, material selection and final use of fabricated product(s) are the responsibility of the customer.*

**Unparalleled accuracy.** **Unbeatable service.**

## **Easy-bolt truck frames with custom hole patterns**

**AFFORDABLE:** Save hundreds of dollars and hours or days of shop time.

**ACCURATE:** New frames exactly duplicate existing or can be modified per your specifications.

**FAST:** Fabricated within 14-18 business days.

### **EASY AS 1-2-3**

#### **STEP 1: Call for an estimate**

Tell us approximately how many holes your truck frames have, what kind of cuts and/or tapers your frames have, what material thickness you would like, and the desired finished length.

We will provide a preliminary estimate for the complete duplication. When we receive your original frame, we will finalize your price.

#### **STEP 2: We arrange inbound shipping of original frame**

We arrange for the pick up and shipping of your existing truck frame. It is NOT necessary to disassemble the whole truck or to send both sides. Simply block up one side of the truck and send one side only.

We will mirror the pattern for the alternate side. You can even mark holes that are not needed on the alternate side or that can be deleted entirely.

If you send an original truck frame, we will quote you the cost for inbound freight AND make all the pick up arrangements so all you have to do is remove the frame sample.

An alternative option of obtaining the hole pattern is a CAD drawing from the manufacturer. This is not typically available, and there is a chance it will not be accurate if the truck has been modified at all in its lifetime. Most customers choose to send original frame(s) to ensure accuracy.

#### **STEP 3: We fabricate your easy-bolt frame(s) and ship to you**

Upon receipt of your original truck frame(s), we will finalize your quote and frame design. **We know your truck is like no other, so at this stage any additional alterations and customization will be incorporated into your design.** The new design could involve moving a hole pattern, or other job-specific changes. We can even utilize multiple patterns from different truck frames to create one new, full length custom truck frame--without splicing.

After the paperwork and payment are processed, your new truck frame(s) will ship in about 14-18 business days.

Note: bolts are NOT included with our frames.

*We installed both sets of rails today. Absolutely amazing fabrication work PG Adams did. The front frame inside dimensions and holes that were in question fit perfectly with no effort. Out of 12 holes in the front I had to ream one hole. The rest of the holes in frame all line up great and if I had to guess at this point, probably no reaming will be needed. Again, amazing fabrication on everyone's part, and any other frame jobs I do the rails will come from PG Adams.*

--Brian Matarozzo, Gearhead Maintenance & Repair in Londonderry, NH

# *Family owned & operated since 1968*

At P.G. Adams, we value the integral role our customers have in the success of our business. We are committed to offering you a consistently superior product while providing an exceptional level of service--and can do so thanks to the dedicated staff of individuals who share this vision.

***With over 50 years of experience, P.G. Adams has earned a reputation of uncompromising quality.***
